600+	28+	2,000+	3 Yrs
REST API Endpoints	ERP Modules	Enterprise Users	Experience

PROFESSIONAL SUMMARY

.NET Full Stack Developer with 3 years of hands-on experience building and delivering production-grade enterprise ERP systems using .NET Framework, .NET Core, ASP.NET, C#, and REST/SOAP Web APIs. Sole backend developer on a 28-module platform serving 2,000+ employees — delivering 600+ REST API endpoints with deep expertise in SQL Server, Entity Framework Core, Dapper, OOP design patterns, and RabbitMQ event-driven architecture. Experienced with front-end technologies including JavaScript, HTML5, CSS, and Angular. Practiced in Git-based source control and Agile/Scrum development environments. Targeting .NET Full Stack Developer roles in Chennai or Bangalore.

TECHNICAL SKILLS

Languages	C#, T-SQL, JavaScript, HTML5, CSS
Backend Frameworks	.NET 9, .NET Framework, ASP.NET Core, ASP.NET MVC, Web API, REST Services, SOAP Services
Frontend	Angular, JavaScript (ES6+), HTML5, CSS3, React.js
ORM / Data Access	Entity Framework Core, Dapper, ADO.NET
Databases	SQL Server (complex queries, stored procedures, database design), Redis
OOP & Design Patterns	SOLID, CQRS, Clean Architecture, DDD, Repository Pattern, Factory Pattern
Messaging / IoT	RabbitMQ (DLQ, idempotency, auto-recovery), MQTT (ZKTeco biometric devices)
Cloud & DevOps	Azure (Document Intelligence / OCR, Blob Storage), Docker, CI/CD, Bitbucket Pipelines, IIS
Source Control	Git, Bitbucket
Security	JWT, MFA/TOTP, OAuth 2.0, RBAC, Data Masking, Audit Logging
API & Observability	Envoy API Gateway, Swagger / OpenAPI, OpenTelemetry, Serilog, SignalR
Testing	xUnit, Testcontainers — payroll, GL, workflow integration tests
Scheduling	Quartz.NET (25+ jobs — payroll, leave accrual, alerts, PPM escalation)
Methodology	Agile / Scrum, Sprint Planning, Code Reviews

PROFESSIONAL EXPERIENCE

.NET Full Stack Developer — Technoduces (Product Studio) Mar 2023 – Present

Client: Adeeb Group, Abu Dhabi, UAE | Enterprise conglomerate, 2,000+ employees | On-site delivery | Agile / Scrum

Stack: .NET 9 / .NET Framework · ASP.NET Core · C# · SQL Server · Angular · JavaScript · HTML5 · CSS · Entity Framework Core · Dapper · RabbitMQ · Docker · Azure · Git · SignalR · Redis · Quartz.NET

- Architected a .NET Full Stack ERP platform with 28+ modules, 600+ REST API endpoints, and 1,170+ domain entities across HRMS, Procurement, Finance, CAFM, Admin, and HSE — serving 500+ concurrent users in production.
- Developed and consumed RESTful and SOAP Web APIs using ASP.NET Core and .NET Framework — enabling seamless integration across frontend Angular interfaces and third-party services.
- Designed and optimised complex SQL Server queries, stored procedures, views, and database schemas — supporting high-volume transactional workloads across ERP modules.
- Applied OOP principles and design patterns (Repository, Factory, CQRS, SOLID) throughout the codebase — improving maintainability and reducing regression defects.
- Implemented Entity Framework Core and Dapper for ORM and lightweight data access — balancing performance with developer productivity across 1,170+ domain entities.
- Engineered event-driven architecture using RabbitMQ with idempotency tracking, dead-letter queues, and auto-recovery — decoupling microservices and ensuring reliable message delivery.
- Designed enterprise approval workflow engine with JSON-configurable node graphs, multi-level approvals, SLA escalation, and audit trail — reduced approval cycle times from days to same-day resolution.

- Implemented hybrid L1/L2 caching (FusionCache + Redis) with circuit breakers and proactive refresh — reduced API P95 latency by ~30% under peak load.
- Integrated Azure AI Document Intelligence (OCR) across 9+ document types — eliminated ~50% of manual data-entry effort, validated with QA benchmarks.
- Implemented JWT authentication, MFA/TOTP, OAuth 2.0, RBAC with fail-closed permissions, data masking, and full audit logging — meeting enterprise security compliance requirements.
- Configured Git-based source control with Bitbucket, Docker multi-stage builds, and CI/CD pipelines with zero-downtime IIS deployments.
- Wrote unit and integration tests for payroll, GL, and workflow modules using xUnit and Testcontainers — maintaining high coverage across critical financial modules.
- Participated in Agile/Scrum ceremonies — sprint planning, daily standups, retrospectives — as sole backend developer coordinating with frontend, QA, and DevOps teams.
- Troubleshot and debugged complex production issues across full stack — from SQL Server query plans to API response errors and front-end integration mismatches.

ERP Modules Delivered

HRMS & Attendance	Biometric integration (ZKTeco/MQTT), leave management, payroll processing, KPI tracking
Finance & GL	Double-entry General Ledger, P&L, trial balance, 16 transaction handlers, reconciliation
Procurement	End-to-end RFQ → PO → GRN → Invoice pipeline with vendor portal
CAFM / Asset Mgmt	PPM scheduling, QR-based asset tracking, depreciation, IoT sensor integration
Helpdesk	SLA escalation engine, real-time SignalR ticketing, priority routing
HSE & Compliance	Incident reporting, permit-to-work workflows, safety induction tracking

SIDE PROJECTS

ASP.NET Core Invoice PDF Generator API — Published on Gumroad github.com/sandhoshsivan

Built and published a paid .NET Web API template for invoice PDF generation — covers multi-currency formatting, GST tax line handling, configurable branding, and REST API endpoint integration. Features JWT-based API key authentication with tiered plans and Razorpay payment integration scaffolding.

EDUCATION & CERTIFICATIONS

B.E. Computer Science and Engineering (CSE) Rathinam Technical Campus · Anna University 2019–2023 84.6% aggregate	Microsoft Azure Fundamentals (AZ-900) Microsoft Certified · Directly relevant to Azure stack used in production
