Technical Skills

Languages: C#, T-SQL, TypeScript, JavaScript

Frameworks & Backend: .NET 9/10, ASP.NET Core, Entity Framework Core, Dapper, MediatR, SignalR, GraphQL

Databases & Caching: SQL Server, PostgreSQL, Redis, FusionCache, SQLite (FTS5)

Messaging & Architecture: RabbitMQ, MQTT, Quartz.NET, Modular Monolith, CQRS, Event-Driven, DDD

Cloud, DevOps & Observability: Azure (Document Intelligence, Blob Storage), Docker, CI/CD, OpenTelemetry, Serilog

Security & Testing: JWT, TOTP MFA, OAuth 2.0, RBAC, AES-256, xUnit, Testcontainers

Experience

Technoduces Info Solutions Pvt Ltd

Mar 2024 – Present

.NET Backend Developer

Coimbatore, Tamil Nadu

- Sole backend engineer on a 28-module ERP for a 2,000+ employee client covering HR, procurement, finance, facilities, and safety (Adeeb Group, Abu Dhabi); built ~600 REST endpoints on .NET 9 / ASP.NET Core serving 500+ concurrent users.
- Designed a double-entry general ledger with 16 transaction handlers that passed internal audit, moving cross-module workflows onto RabbitMQ with idempotent consumers and dead-letter queues to eliminate double-posting.
- Cut API P95 latency by ~30% via a two-tier FusionCache and Redis caching layer; diagnosed a critical production CPU spike tied to a 104 GB unindexed log table, replacing full-table scans with targeted indexes to drop query latency to sub-100 ms.
- Enhanced platform security through JWT, TOTP MFA, and fail-closed RBAC with row-level tenant scoping; deployed Azure Document Intelligence OCR across 9 document types, eliminating 20 hours of manual data entry monthly.

Projects

Khazana - Offline-First Personal Finance Platform

[Live Demo](#) | github.com/sandhoshsivanM/FinTech | *TypeScript, Web Crypto, SQLite, CI/CD*

2025 – Present

- Designed and built a zero-telemetry personal finance app to eliminate cloud privacy vulnerabilities, serving as sole architect for an offline-first, client-only architecture.
- Engineered a local double-entry ledger across 23 schema-versioned tables, developing a lot-level portfolio engine with FIFO matching, XIRR calculations, and arbitrary-precision decimal arithmetic executing sub-millisecond portfolio evaluations.
- Secured local records using zero-knowledge AES-256 encryption with PBKDF2-HMAC-SHA256 key stretching at 600,000 iterations, guaranteeing zero plaintext storage and benchmarked at 49 ms per unlock.
- Guaranteed local state consistency across 6 schema migrations and eliminated regression risks by authoring 1,504 automated test suites gated through a strict CI pipeline.

HireFlow Pro v2 - AI Job Tracking Platform

github.com/sandhoshsivanM/hireflow-pro | *.NET 10, ASP.NET Core, PostgreSQL, React 19, Docker, Stripe* 2025 – Present

- Architected a full-stack job application tracker to streamline hiring pipelines, deploying a three-layer clean architecture (Core, Infrastructure, API) containerized via Docker on Render with automated CI/CD.
- Engineered an AI-driven resume scoring engine using Claude and Gemini APIs to match resumes against job descriptions (0–100 scoring) and extract critical keyword gaps.
- Mitigated external LLM operational costs by implementing tiered plan usage quotas, JWT-authenticated authorization, and a deterministic hash-caching layer that eliminated 100% of redundant API calls on unchanged resumes.
- Delivered a 6-stage Kanban application pipeline featuring immutable audit trails, structured CSV data export, and automated end-to-end tiered subscription billing integrated with Stripe webhooks.

Education

Rathinam Technical Campus, Anna University

Aug 2019 – Apr 2023

Bachelor of Engineering in Computer Science and Engineering

Coimbatore, Tamil Nadu

Certifications

Microsoft Certified: Azure Fundamentals (AZ-900) | Microsoft

2023

Claude Code in Action / Prompt Engineering | Anthropic (Skilljar)

2026

Get Started With Redis | Redis University

2026
