Professional Summary

Backend Developer (.NET) with **2.5+ years** building enterprise APIs on ASP.NET Core, SQL Server and RabbitMQ, focused on **sub-100 ms** responses, event-driven workflows and **offline-first** systems.

Experience

Technoduces Info Solutions Pvt Ltd **Mar 2024 – Present**
Backend Developer (.NET) *Coimbatore, Tamil Nadu*

- Engineered the backend of a **28-module ERP** (HR, procurement, finance, facilities, safety) for a **2,000+ employee** client in Abu Dhabi as sole backend developer: **∼600 REST endpoints** on .NET 9 serving **500+ concurrent users**.
- Stopped finance entries being recorded twice across modules by building an accounting ledger with **16 transaction types** and moving workflows onto RabbitMQ with safe retries; duplicates went to **zero** and the system passed internal audit.
- Fixed a production CPU spike caused by an unindexed **104 GB** log table; targeted indexes and a two-level cache (FusionCache + Redis) brought slow queries under **100 ms** and cut API P95 latency by **∼30%**.
- Saved the client **20 hours a month** of manual data entry by automating document reading with Azure Document Intelligence OCR across **9 document types**; secured access with JWT, two-factor login and role-based permissions.

Projects

Khazana – Offline-First Personal Finance App
Live Demo | github.com/sandhoshsivanM/FinTech | *TypeScript, Dart/Flutter, Web Crypto, SQLite* **2025 – Present**

- Built a personal finance app that runs on **5 platforms** with no server and no account, keeping all data on the device; sole developer and architect.
- Encrypted every record with AES-256-GCM under a PIN-derived key (**600,000** PBKDF2 iterations) that is never stored, while keeping unlock at **49 ms**.
- Made all **6** database migrations safe to re-run, since they upgrade encrypted data on devices nobody can inspect; full-text search answers **10,000** transactions in **∼0.13 ms**.
- Wrote the accounting ledger (**23 tables**) and investment engine (FIFO, XIRR, capital gains) in both Dart and TypeScript, kept identical by cross-language tests; every push passes **1,633 tests** in CI.

HireFlow Pro v2 – AI Job Application Tracker
github.com/sandhoshsivanM/hireflow-pro-v2 | *.NET 10, ASP.NET Core, PostgreSQL, React 19, Docker* **2025 – Present**

- Built a full-stack tracker on a 3-layer clean architecture: **45 REST endpoints** across **8 controllers**, containerised with Docker and auto-deployed to Render.
- Added AI resume matching on the Claude and Gemini APIs that scores a resume **0–100** against a job description and lists the missing keywords.
- Capped AI cost with per-user monthly quotas across **3 plans** (**5 / 90 / unlimited**) tracked per month in PostgreSQL behind JWT authentication.

Technical Skills

Languages: C#, T-SQL, TypeScript

Backend: .NET 9/10, ASP.NET Core, Entity Framework Core, Dapper, SignalR

Data & Messaging: SQL Server, PostgreSQL, Redis, RabbitMQ

Cloud, DevOps & Security: Azure, Docker, CI/CD, JWT, OAuth 2.0, RBAC, xUnit

Education

Rathinam Technical Campus, Anna University **Aug 2019 – Apr 2023**
B.E. in Computer Science and Engineering · ***CGPA 8.45 / 10*** *Coimbatore, Tamil Nadu*
