Summary

Backend engineer with 2.3 years building server-side systems in .NET. Sole backend developer on a 28-module ERP serving 2,000+ employees, with 600+ REST endpoints in production, including a double-entry general ledger that passed internal audit.

Skills

Languages and Frameworks: C#, T-SQL, TypeScript, .NET 9 / 10, ASP.NET Core, Entity Framework Core, Dapper, MediatR, SignalR, GraphQL

Data: SQL Server, PostgreSQL, SQLite (FTS5), Redis, FusionCache

Messaging and Scheduling: RabbitMQ, MQTT, Quartz.NET

Cloud and DevOps: Azure (Document Intelligence, Blob Storage), Docker, GitHub Actions, Bitbucket Pipelines, IIS

Security: JWT, MFA/TOTP, OAuth 2.0, RBAC, Ory Kratos, AES-256, PBKDF2

Architecture and Testing: Modular Monolith, CQRS, Event-Driven, Domain-Driven Design, xUnit, Testcontainers

Observability: OpenTelemetry, Jaeger, Serilog

Experience

Technoduces (Product Studio)	Coimbatore, India
Backend Developer (.NET)	March 2024 - Present
- Sole backend engineer on a 28-module ERP for a 2,000+ employee client covering HR, procurement, finance, facilities and safety, on-site for Adeeb Group, Abu Dhabi; built ~600 REST endpoints on .NET 9 / ASP.NET Core now serving 500+ concurrent users. - Designed a double-entry general ledger with 16 transaction handlers that passed internal audit, and moved cross-module work onto RabbitMQ with idempotent consumers and dead-letter queues so a retried message cannot double-post. - Cut API P95 latency ~30% with a two-tier FusionCache and Redis layer, and traced a production CPU fault to a 104 GB unindexed log table, taking the two worst queries off full table scans. - Secured the platform with JWT, TOTP MFA and RBAC failing closed with row-level scoping, and automated 25+ Quartz.NET jobs plus Azure Document Intelligence OCR across 9 document types, cutting manual data entry ~50% and ~20 hours of manual work a month.	

Projects

Khazana - Offline-First Personal Finance Platform	2025 - Present
Live at khazana-app.netlify.app Source at github.com/sandhoshsivanM/FinTech	
- Offline-first personal finance platform with no backend, no account and no telemetry, designed and built solo. - Designed a double-entry ledger across 23 encrypted tables with 6 idempotent schema migrations, plus a lot-level portfolio engine with FIFO matching, XIRR and capital-gains versioned by disposal date; all money in arbitrary-precision decimal. - Encrypted every record with AES-256 keyed by a PIN stretched through PBKDF2-HMAC-SHA256 at 600,000 iterations and never stored, at 49 ms per unlock on a committed benchmark, with 1,504 automated tests gated in CI.	

Education

Rathinam Technical Campus, Anna University, Coimbatore	2019 - 2023
Bachelor of Engineering in Computer Science and Engineering Aggregate: 84.6%	

Certifications

Microsoft Certified: Azure Fundamentals (AZ-900)	2023
